PROJECTS

Attendance Using Face Recognition

- A Python-based face recognition attendance system using OpenCV, Deep Face, TensorFlow, NumPy, and Pandas. It captures faces via webcam, detects and verifies them in real time, and records attendance with date and time in a CSV file. A virtual environment is used to manage dependencies and ensure a smooth setup.

Vehicle Detection- Motion Detection

- Developed a motion detection system using Python, OpenCV, and NumPy to track vehicle movement and detect unusual environmental motion with approximately 70% training accuracy.
- Added functionality to count and report the number of vehicles passing through the monitored area, leveraging image processing and data analysis techniques.

Portfolio Website

- Developed a fully responsive personal portfolio website to showcase web development skills and projects, featuring a modern and clean design.
- Optimized the website for performance, accessibility, and cross-browser compatibility using HTML and CSS.

Interface of an E-Commerce Website

- Designed a basic E-commerce website interface within an hour at the Mega Career Conclave Event organized by Nexverse Digital Studios.
- Developed the interface using HTML and CSS, showcasing rapid prototyping and web development skills.
